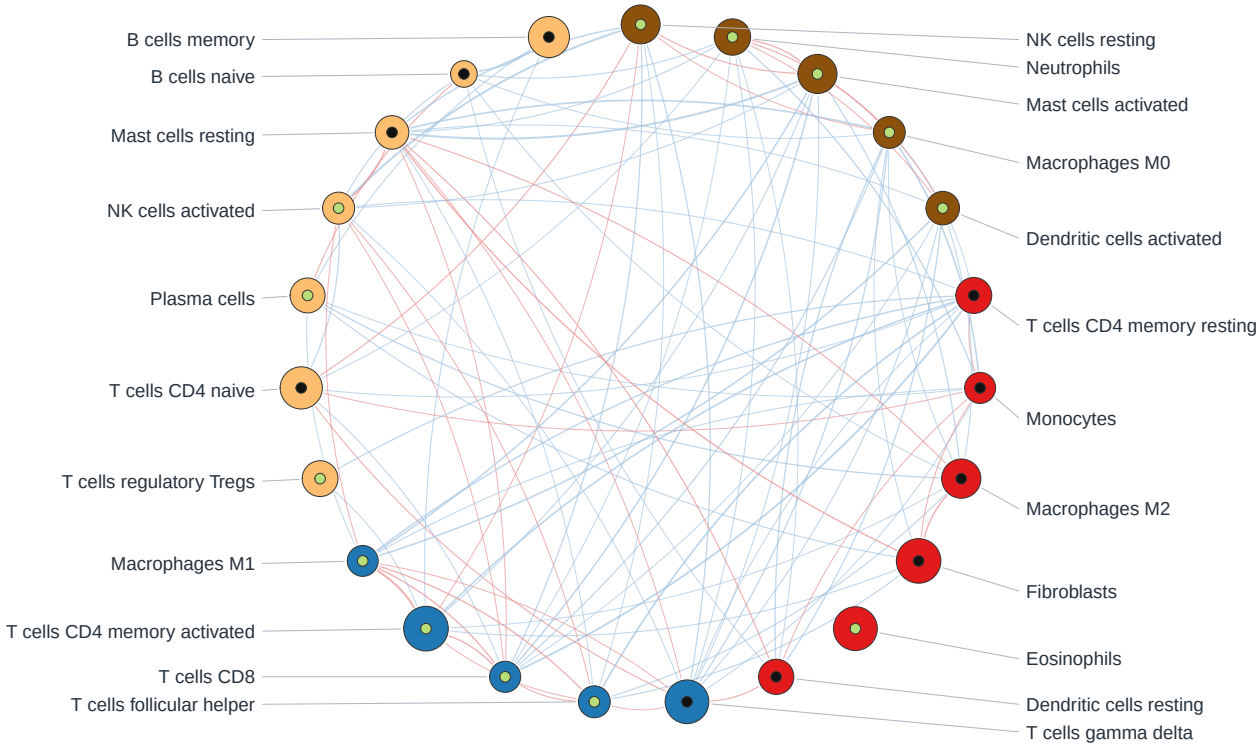
Immune−cell correlation network

1991 samples; 23 nodes; 96 supplied edges with P < 0.0001



Source curated groups

- Cluster A
- Cluster B
- Cluster C
- Cluster D

Supplied HR direction

- HR > 1
- HR < 1
- HR = 1

Spearman correlation

- Positive
- Negative

P < 0.0001 (unadjusted)

Log−rank P (diameter)

5e−02 1e−03 1e−05 1e−08

Supplied edges only; unadjusted P threshold; no causal or survival−significance claim.
Node diameter = base + scale x sqrt(−log10(P) + 1); area is not proportional to −log10(P).
