
72 supplied samples / 17 features; uncorrected Bray−Curtis PCoA. Equal x/y units; marginal boxes share scatter limits.
38 negative eigenvalues (14.5% of absolute eigenvalue sum); axis percentages use the original signed−sum denominator.
Letters: original axis−wise ANOVA/Tukey; shared letters mean no detected difference at 0.05. PERMANOVA: 999 free permutations, seed fixed.
Singleton group(s): SCNC_P; no within−group distribution estimate. Sampling design and dispersion assumptions are unverified.
