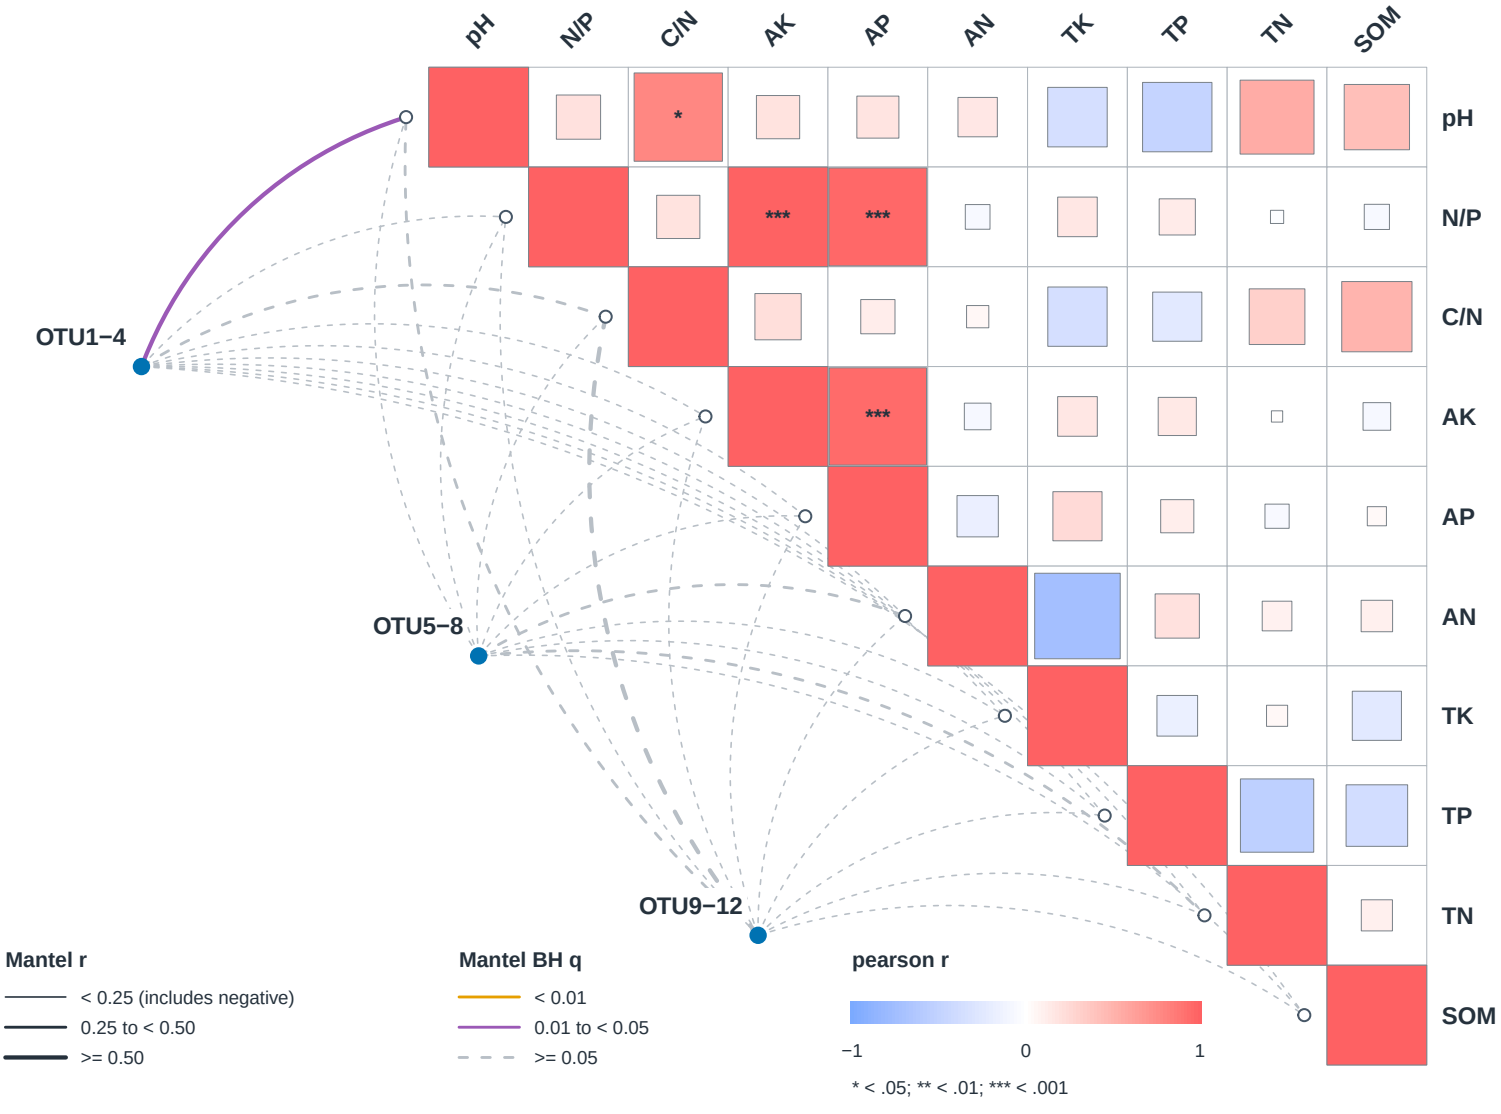
OTU groups and individual environmental associations

Environment: pearson; square area = |r|; no causal interpretation



12 matched samples; 12 selected OTUs; 48 others excluded; Bray−Curtis vs each single environmental variable.

Mantel: positive one−sided Pearson; 999 shared permutations, seed 363, free (exchangeability unverified); colors/stars use BH q.

Separate BH families: 30 links / 45 pairs; no diagonal test. Zero−total group rows: 1 (Bray = 1 vs nonempty).
